

Gireesh Singh Thakurathi

September 2019

Hello,

Getting hired via hackathon, during his tenure at JP Morgan, Gireesh has proven his technical expertise as full-stack developer.

Snapshot of his recent work includes:

- Front-end development using GoogleWebToolkit.
- End-to-end delivery of financial modules like consolidated invoice.
- Batch job optimization and automation.
- BDD, TDD, defect resolution and production support.

Speaking of academics, he recently received Masters Fellowship scholarship of 20,000 USD.

He has worked in every part of software development cycle and is a keen learner. His ability to work alone and in teams is clearly demonstrated by the multiple projects and organizations that he has worked with in the past. This curiosity displays drive and passion for computer science which directly translates to his firm commitment, responsibility and dedication for this internship.

You can get an overview of his work through his resume.

Thank you for your time and consideration.
