Getting hired via hackathon, during my tenure at JP Morgan, I served as a full stack software developer (for 2 years).

Snapshot of my recent work includes:

- Full stack development of financial modules like consolidated invoice, SWIFT, SFMS.
- Batch job optimization using multithreading (partitioners) and automation.
- Front-end development using GoogleWebToolkit.
- BDD, TDD, defect resolution and production support.

Speaking of academics, I recently received Masters Fellowship scholarship of 20,000 USD.

At JP Morgan I contributed to the following tasks:

- Contributed in meetings with Product Owners globally.
- Understood user requirements & translated them to programmable problem statements.
- Brainstormed and reached consensus on implementation of those requirements.
- Faced challenges like scope creep, change of requirements, external dependency, implementation of new technology, resource and time crunch.
- Divided tasks into iterations to be delegated to sub teams and individuals.
- Acted as a full stack developer implementing UI, DB queries and business logic.
- Collaborated with different team representatives when needed.
- Lead initiatives and team of 200+ developers.
- Developed POCs to bolster my idea with numbers and facts.
- Presented ideas, findings and results of Proof of concepts in meetings.
- Tested features before commits and provided support during release.
- Patched defects and made changes post and pre release to meet satisfaction and ever changing demands of Ops team and Product owners.

You can get more insights into my projects, technical skills, academic history and quantifiable data on my work through my resume.

As you can see, I have worked in diverse sections of the software development cycle. My ability to work alone and in teams is clearly demonstrated by the projects and organizations that I have worked with in the past. Although I have some experience as a developer, I think it is my insatiable curiosity and drive to learn and grow that makes me a perfect fit for this role. Thank you for your time and consideration.

Sincerely,
Gireesh
